

Aims and scope

The *Journal of Asian Ceramic Societies* is an open access journal publishing papers documenting original research and reviews covering all aspects of science and technology of Ceramics, Glasses, Composites, and related materials. These papers include experimental and theoretical aspects emphasizing basic science, processing, microstructure, characteristics, and functionality of ceramic materials. The journal publishes high quality full papers, letters for rapid publication, and in-depth review articles. All papers are subjected to a fair peer-review process, and will immediately appear online available through <http://www.sciencedirect.com/science/journal/21870764>

Description

The *Journal of Asian Ceramic Societies* has as its objective the publication and dissemination of original research in Ceramics, Glasses, Composites and related materials as a field of Materials Science and Engineering. It fosters thus the exchange of ideas among workers in different parts of the world and also among workers who emphasize different aspects of the foundations and applications of the field.

Standing as it does at the cross-roads of Inorganic Chemistry, Chemical Engineering, Solid State Physics and Chemistry, Materials Science of Ceramics is experiencing considerable growth as a result of recent technological advances. The Journal, by providing an international medium of communication, is encouraging this growth and is encompassing all aspects of traditional and advanced ceramics.

The emphasis is placed on contributions, analytical, experimental and numerical, which appear to be of permanent interest to research workers and engineers in the field. If furthering knowledge in the area of principal concern of the Journal, papers of primary interest to the constitutive disciplines of Material-related Physics, Chemistry and Engineering may be published. Papers which are merely illustrations of established principles and procedures, even though possibly containing new numerical or experimental data, will generally not be published.

When outstanding advances are made in existing areas or when new areas have been developed to a definitive stage, special review articles will be considered by the Editors.

No length limitations for contributions are set, but only concisely written papers are published. Brief articles are considered on the basis of technical merit. Discussions of previously published papers are welcome.

Audience

Materials scientists, chemical/physical engineers, civil engineers

Notice

No responsibility is assumed by The Ceramic Society of Japan and the Korean Ceramic Society nor Elsevier for any injury and/or damage to persons, property as a matter of product liability, negligence, or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein. Because of rapid advances in medical sciences, in particular, independent verification of diagnoses and drug dosages should be made.
